**(54) FACSIMILE COMMUNICATION SYSTEM**

(57) Abstract:

**PURPOSE:** To achieve economization without spoiling the advantage of a store and forward switching type facsimile communication system, by immediately transferring data without storing it when the free state of an incoming terminal is discriminated.

**CONSTITUTION:** Picture information from an originating terminal FAXA is stored in a storing and converting device STOC only when the central processor CCO of a switchboard ES-FX judges that the standard CL1 of the originating terminal FAXA and the standard CL2 of a terminating terminal FAXB extracted from a subscriber file S are different from each other, or when the terminating terminal FAXB is in a busy state. When the standard CL1 and standard CL2 are coincident and the terminating terminal FAXB is in a free state, a picture signal is transferred immediately through an instantaneous circuit SIOT and never stored in the storing and converting device STOC.
